1.1 About the controller

1.1.1 Licences and supported features

The supported features shown in this document depend on the software licence installed.

The standard license is the **Core** licence including synchronising and load share, and support. Alternatively, you can select the **Premium** licence, which includes power management features and support.

Example

Controllers with the Power management licence can be included in a power management system. A power management system can include a number of controllers. The controllers work together to ensure effective power management. This can include load-dependent start and stop, and may include setting the genset priority order, managing heavy consumers, and, if necessary, tripping non-essential loads.

1.1.2 About the controller types

The iE 250 is a versatile and modular-designed controller for land. Its design enables you to tailor the installation to your needs.

Available hardware versions:

- **iE 250 (7")**: Front-mounted version with 7" touchscreen.
- **iE 250 (Base)**: Base-mounted version for DIN rail or fixed (180° rotated) mounting in back panel.

2.6 Measurement Input Output module (MIO2.1)

2.6.1 About

The Measurement Input and Output module (MIO2.1) is an add-on module for the iE 250. It features 8 bi-directional digital terminals, allowing smart flexibility where you can use them for what you need.

AC measurements

The module measures the voltage and current on one side of a breaker, and the voltage on the other side. The hardware module responds when the measurements exceed the AC alarm parameters.

The module provides robust frequency detection in environments with electrical noise. It allows extended measurement bandwidth up to 40 times the nominal frequency. It includes a configurable 4th current measurement.

Additional features

- Analogue outputs for GOV and AVR.
- 8 Digital input channels.
- 8 Digital bi-directional channels.
- Analogue Tacho (MPU/N/NPN/PNP) input.
