

Power Factor Meter, PFQ

Measure power factor

The PFQ power factor meter measures cos phi with a moving coil movement and an electronic transducer. The transducer measures the phase angle between an AC voltage and the corresponding AC current, converting the signal into a proportional DC current which is then fed to the moving coil instrument.

PFQ features

- ▶ Accuracy class: 1.5
- ▶ 90° and 240° pointer deflection
- ▶ Available in size Q96

PFQ type approval
