1. About measuring current transformers

1.1 About measuring current transformers

Measuring current transformers convert high current into lower nominal current value, thus making it possible to use instruments and relays with standardised values of rated current.

DEIF offers numerous different physical sizes of the measuring transformers in two series:

- ASR: designed for round cables.
- ASK: designed for cables and busbar.

1.2 Technical specifications, general

4. Accessories and options for current transformers

Accessory	Description
Mounting	Foot angle for screw mounting and busbar mounting screws with isolating protection caps are supplied along with the current transformer. DIN rail mounting accessory is stated at the individual CT type if it is available.
Sealed shutter	Transparent plastic cover protects the current transformer. The type label remains visible. Not available for all current transformer types. The sealed shutter part number is stated at the individual CT type if it is available.
Test certificate	Test certificate for a specific current transformer. Option to be selected at time of order.
Excitation curve	Excitation curve for a specific current transformer. Option to be selected at time of order.
Optional frequency	Standard frequency range is 50 to 60 Hz. Contact DEIF for special versions with other frequency ranges.
Cast resin	Standard for all current transformers with a nominal current >4000A. Current transformers with a nominal current <4000A can be produced with cast resin on request. The min. and max. weight specifications for each type refers to standard versions. The specification is different if cast resin is ordered for current transformers <4 000 A.
