

Synchroniser, FAS-113DG

Automatically synchronise your generator with voltage control

The FAS-113DG synchroniser is applied for synchronisation of a generator to the busbar and closing of its circuit breaker when the voltage difference, the slip frequency and the phase angles are within the preset limits.

Part of the Uni-line product range, FAS-113DG can be applied in conjunction with a wide range of prime movers, as its control pulses may be set to fit several types – from slow reacting diesel engines to fast reacting gas turbines.

FAS-113DG features

- ▶ Synchronisation of generator to busbar
- ▶ Circuit breaker time compensation
- ▶ Voltage control
- ▶ LED indication of status
- ▶ LED for activated control
- ▶ LED for synchronising signal
- ▶ 35 mm DIN rail or base mounting
