## 1.1 General information

### 1.1.1 Application

The Paralleling and Protection Unit, PPU-3, is a compact all in one microprocessor-based control unit containing all necessary functions for protection and control of a synchronous/asynchronous generator. It contains all necessary galvanically separated 3-phase measuring circuits.

The PPU-3 is intended for marine-based applications. It is designed for the following applications (can be combined):

1. Stand-alone
2. Parallel with other generators

The PPU-3 can synchronise the generator and after synchronisation carry out all necessary generator control and protective functions. It is well-suited for PLC-controlled systems and the interfacing can be done via digital and analogue I/Os or via serial communication.

### 1.1.2 Display unit

The display unit is separate and can be installed directly on the main unit or in the front of the switchboard door (3 m display cable included). Up to two additional displays can be installed within 200 m.

The display unit shows all measured and calculated values as well as alarms and data from the event log.

### 1.1.3 Regulation modes

Four different regulation modes can easily be selected through digital inputs on the standard PPU-3, and the governor will be controlled accordingly:

1. Fixed frequency
2. Fixed power (base load)
3. Frequency droop
4. Load sharing

If the automatic voltage regulator is controlled by the PPU-3, the standard operation modes are extended with:

1. Fixed voltage
2. Fixed reactive power
3. Fixed power factor
4. Reactive load sharing
5. Voltage droop

**NOTE** AVR control requires option D1.

### 1.1.4 Self-test

The PPU-3 automatically carries out a cyclical self-test at start-up. If any errors are found, they will be displayed in clear text in the display and indicated with a relay output (status output).

### 1.1.5 M-Logic (Micro PLC)

This configuration tool is part of the PC utility software which is free of charge. With this tool, it is possible to customise the application to your needs. It is possible to dedicate specific functions or logical conditions to different inputs and outputs.

### 1.1.6 Engine control and protection

With the engine control and protection option added, the PPU-3 will control the start and stop sequences of the engine and furthermore it can be used as engine protection unit providing full backup of engine shutdown channels in case the main processor fails.

### 1.1.7 CANshare

Some applications require supervision of wire break and short circuit of the load sharing lines. Since the standard analogue load sharing lines do not include any supervision, it is recommended to use the optional CANshare feature (option G9) for these applications.

### 1.1.8 Setup

Setup is easily done via a menu structure in the display (password-protected) or via the USB PC connection and the Multi-line 2 Windows -based PC utility software. The PC utility software can be downloaded free of charge from [www.deif.com/Download\\_centre](http://www.deif.com/Download_centre). The utility software offers additional features such as monitoring of all relevant information during commissioning, saving and downloading of settings and downloading of software updates.

### 1.1.9 Options

In order to perfectly match the product solution to specific applications, the functionality of the PPU-3 can be equipped with a number of available options. The options selected by the customer will be integrated in the standard PPU-3, hereby securing the same user interface unaffected by whether the application needs a highly complex or a more basic genset controller.

Refer to the paragraph "Available options" for the options available.

### 1.1.10 Approvals

The PPU-3 is marine-approved by all major classification societies and is UL/cUL listed.

**NOTE** Refer to [www.deif.com](http://www.deif.com) for details and certificates.

## 1.2 Protections

### Protections

The following protection functions are included as standard functions

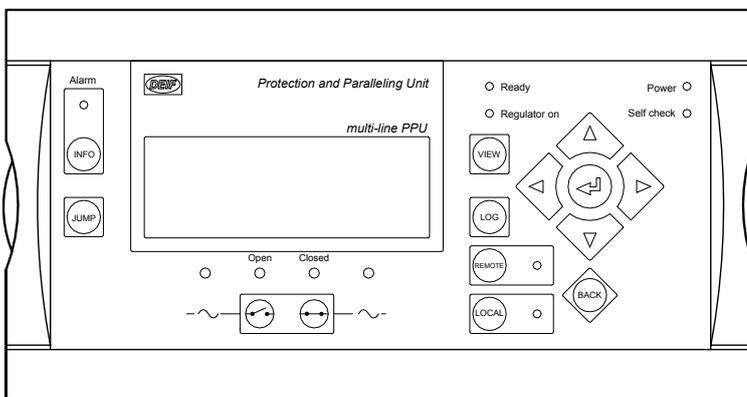

Protection function	ANSI no. *	Levels
Generator reverse power	(32)	2 steps
Generator over-current	(50/51)	6 steps

Voltage-dependent over-current	(51V)	1 step
Inverse time over-current	(51)	1 step
Generator over-voltage	(59)	2 steps
Generator under-voltage	(27)	3 steps
Generator over-frequency	(81)	3 steps
Generator under-frequency	(81)	3 steps
Busbar over-voltage	(59)	3 steps
Busbar under-voltage	(27)	4 steps
Busbar over-frequency	(81)	3 steps
Busbar under-frequency	(81)	4 steps
Busbar voltage unbalance	(60)	1 step
NEL group		3 steps
Generator overload	(32)	5 steps
Current unbalance	(60)	1 step
Voltage unbalance	(60)	1 step
Over-excitation	(40/32 RV)	1 step
Loss of excitation	(40/32 RV)	1 step

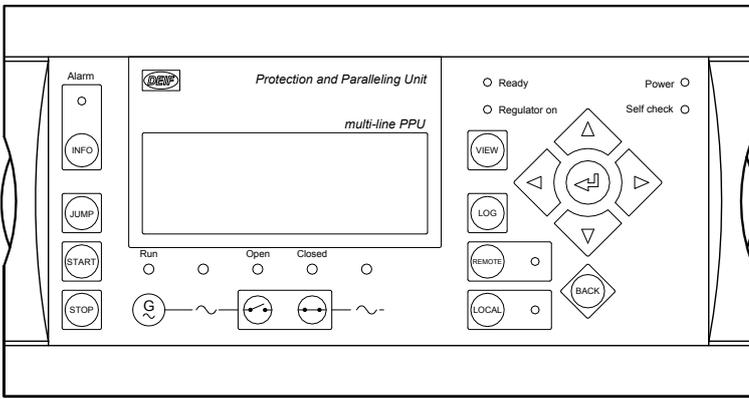

\* (ANSI# as per IEEE Std. C37.2-1996 (R2001) in parenthesis).

## 1.3 Display layouts

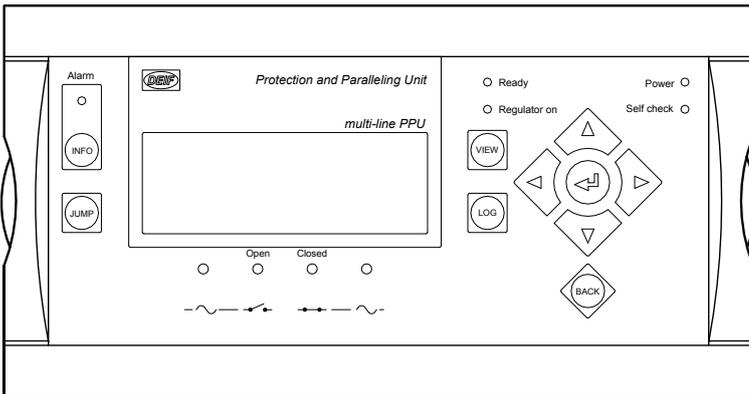

Standard delivery

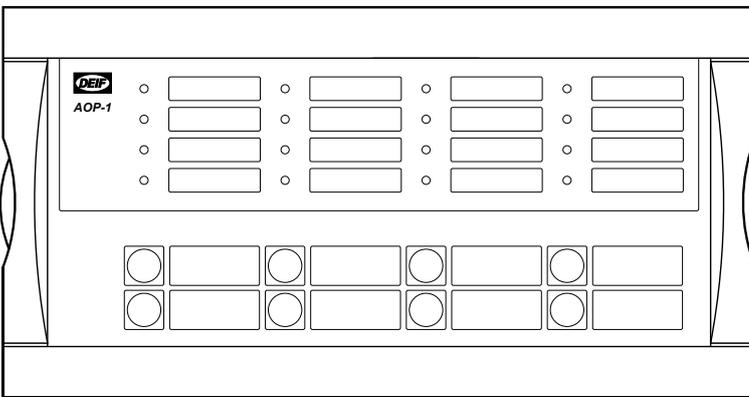

Engine and GB control (option Y1)

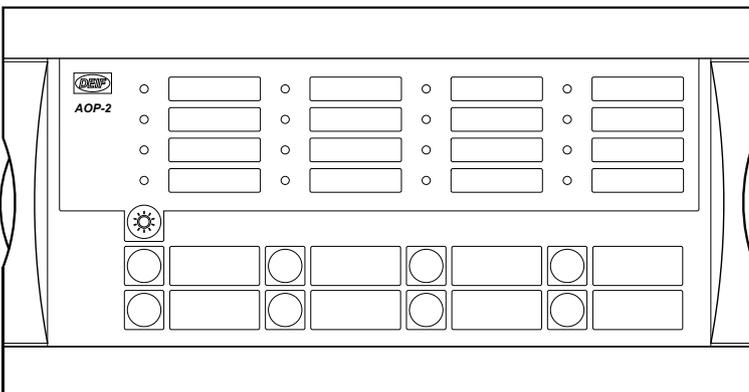

Display without Local control buttons (option Y11)

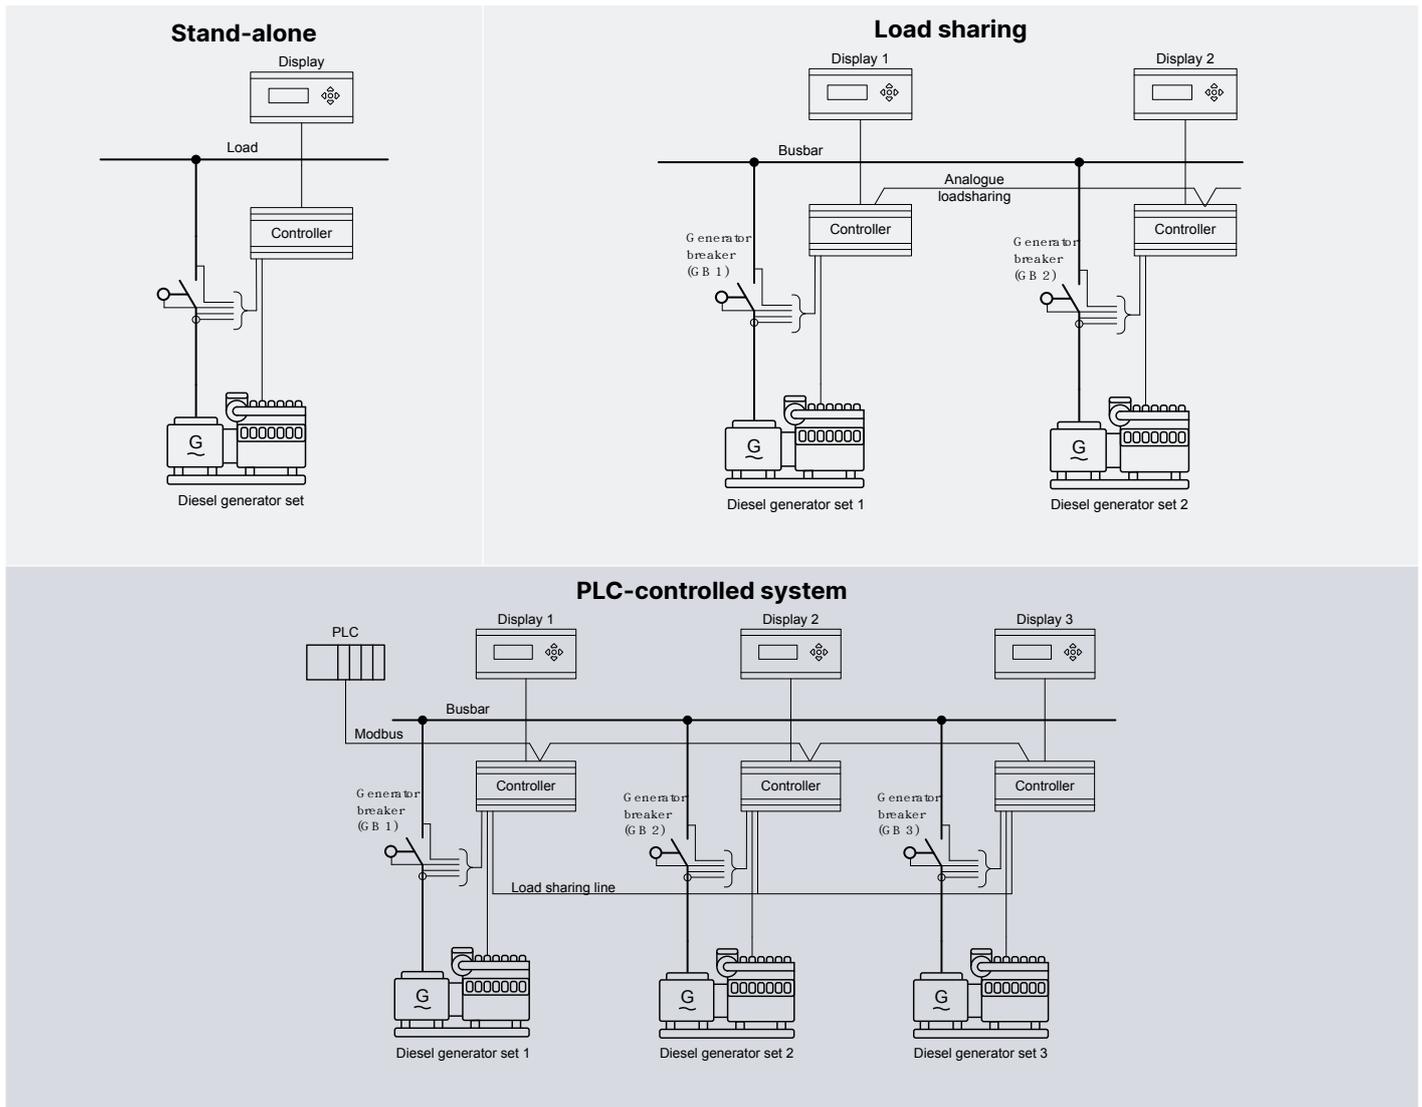

Additional operator panel - AOP-1 (option X3)

Additional operator panel - AOP-2 (option X4)

## 1.4 Application examples

**NOTE** The PPU-3 can be used in simple or complex applications. The above shows some of the applications, but due to the flexible mode selection, the PPU-3 can be used in all applications. The PPU-3 is also designed to work with the Uni-line components such as the FAS (Full Automatic Synchroniser), should this be preferred.

	H9.2	Modbus RTU/ASCII (RS-232)
	M14.2	4 × relay outputs
<b>3</b>		<b>Terminal 37-64, load sharing</b>
	Standard	13 × digital inputs; 4 × relay outputs; 1 × P load sharing line; 1 × Q load sharing line; 2 × inputs for ext. set point (GOV/AVR)
<b>4</b>		<b>Terminal 65-72, GOV/AVR/transducer outputs</b>
	Standard	4 × relay outputs
	E1	2 × +/-20 mA outputs
	E2	2 × 0(4) to 20 mA outputs
	EF2	1 × +/-20 mA output; 1 × 0(4) to 20 mA output
	EF4	1 × +/-20 mA output; 2 × relays
EF5	1 × PWM output; 1 × +/-20 mA output; 2 × relays	
<b>5</b>		<b>Terminal 73-89, AC measuring</b>

Slot #	Option/standard	Description
	Standard	3 × generator voltage; 3 × generator current; 3 × busbar/mains voltage
<b>6</b>		<b>Terminal 90-97, inputs/outputs</b>
	F1	2 × 0(4) to 20 mA outputs
	M13.6	7 × digital inputs
	M14.6	4 × relay outputs
	M15.6	4 × 4 to 20 mA inputs
<b>7</b>		<b>Terminal 98-125, engine I/F</b>
	M4	8 to 36 V DC supply, 5 W; 1 × magnetic pickup (MPU); 3 × multi-inputs; 7 × digital inputs; 4 × relay outputs
